Life Begins Again in April

by Lenore Hetrick

Life begins again – in April! How this dead earth comes to flower! How the dry boughs wake and quicken In this blooming, springtime hour!

Life begins again – in April! And the bird is on the wing, Brooks are flowing, breezes tender In a rhapsody of spring.

Where's the heart that can be downcast? Where's the eye that does not brighten? Behold the world so fresh and new As the dark skies part and lighten!

Those who sorrow shall take comfort, Those who droop shall smile again. April brings a message clearly To the weariest of men.

Yesterday may lie in ruins,
All the past be dead and drear.
Just forget that! Skies are bright blue!
It's the springtime of the year.

It is April! Nature's own month!
It is April! Heaven's season!
April – flowering – stirring – blooming!
Quite beyond man's meager reason.

Life begins again – in April! Hill and valley reel with living. To all things new life she brings With joyous fervor in her giving.

POSITIVE ATTITUDE LEADS TO A HEALTHY LIFE

The word 'wellness' is showing up more and more these days. There is actually a Global Wellness Institute which defines wellness as the active pursuit of activities, choices and lifestyles that lead to better health.

Wellness isn't a passive state. It's an "active pursuit" that is associated with our intentions, choices and actions as we work towards the optimal state of health and well-being.

Wellness extends beyond physical health. We often think of wellness in terms of health, well-being and happiness. These all have common elements. Wellness is distinguished by being an active process of being aware and making choices that lead toward an outcome of optimal health and well-being.

Positive attitude and positive thinking help with stress management and can even improve health. Studies show that personality traits such as optimism and pessimism can affect our health and well-being.

Positive thinking means that you approach unpleasantness and are more positive in a productive way. This starts with self-talk which is the endless stream

of unspoken thoughts that run through our heads. These automatic thoughts can be positive or negative.

The health benefits that positive thinking may provide include:

- increased lifespan
- lower rates of depression
- lower levels of distress and pain
- greater resistance to illness
- better psychological and physical well-being
- better heart health
- reduced risk of death from cancer
- reduced risk of death from lung conditions
- reduced risk of death from infections
- better coping skills during hardships and times of stress.

Researchers are also finding that individuals with a positive attitude are less likely to experience memory decline as they get older. And it's not just the brain that benefits from positive thinking, but heart health as well.
